LinkedIn: <https://www.linkedin.com/in/omar-dahmash-b34693a4> | GitHub: <https://www.github.com/omartdh>

Portfolio: <https://omartdh.github.io/portfolio>

Front-end web developer, provides efficient web solutions mixing the art of design with programming skills to build an immersive user experiences. Earned a recent certificate in full stack web development from UC San Diego where I was able to build web applications from the ground up developing skills in JavaScript, CSS, and React.JS. Gained experience in problem solving, information gathering, planning, testing and deploying. Passionate about software architecture and UI design. Excited to apply my skills towards a successful career as a front-end web developer. Fluent in English and Arabic.

TECHNICAL SKILLS:

Frontend: HTML5, CSS, JavaScript, jQuery, Bootstrap, and React.JS

Backend: MySQL, MongoDB, Express, Node.JS, MERN Stack

API Interaction: (API, JSON, AJAX)

Deployment: (Heroku, Git)

PROJECTS:

CRYPTOGRAPHY - <https://cryptography-ss.herokuapp.com/> | <https://github.com/omartdh/cryptography>

Full-stack web app that allows users to track their cryptos and see live crypto prices

- Using agile methodology led a team of three in creating an MERN web app that allows users to save their crypto currencies and keep track of it, and having a list of live prices of the coins, as well as a news slide bar of the recent news about crypto market.
- Was responsible on the whole front-end specifically React.JS, and CSS, and also on the updates section of MongoDB on the backend
- Tools used: HTML5, CSS, JavaScript, Bootstrap, React.JS, MongoDB, Express, Node.JS, deployed to Heroku.

DAY PLANNER - <https://omartdh.github.io/workDayScheduler/> | <https://github.com/omartdh/workDayScheduler>

Front-end web app that allows users to add their daily tasks, saving it, and track it through out the day

- Worked on the project by myself.
- Tools used: HTML5, CSS, JavaScript, jQuery, and Bootstrap

WEATHER/MOOD TRACKS - <https://bit.ly/weathermoodtracks> | <https://bit.ly/weathertracks>

Front-end web app that suggest music to listen based on the current weather

- Worked on this project with a team of 4, users can check the weather in their city via a search bar, then the app will suggest bunch of music tracks based on the current weather, users can play the tracks and save it.
- Was responsible on the front-end work (HTML & CSS & JavaScript) also the weather API and the whole weather section
- Tools used: HTML5, CSS, JavaScript, jQuery, and Bootstrap

EDUCATION:

-University of California San Diego, San Diego, CA May 2021
